Arithmetic coding is a form of entropy encoding used in lossless data compression. Normally, a string of characters such as the words "hello there" is represented using a fixed number of bits per character, as in the ASCII code. When a string is converted to arithmetic encoding, frequently used characters will be stored with fewer bits and not-so-frequently occurring characters will be stored ...

#### Arithmetic Coding: Introduction

Computers use binary arithmetic, representing each number as a binary number: a finite sum of integer powers of 2. Some numbers can be represented exactly, but others, such as  $1/10$ ,  $1/100$ ,  $1/1000, \dots$ , cannot. For example,  $2.125 = 2 \cdot 1 + 2^{-3}$  has an exact representation in binary (base 2), but
