In combinatorial mathematics, a derangement is a permutation of the elements of a set, such that no element

appears in its original position. In other words, derangement is a permutation that has no fixed points. The number of derangements of a set of size  $n$ , usually written  $D_n$ ,  $d_n$ , or  $!n$ , is called the "derangement number" or "de Montmort number". (These numbers are generalized to ...)

In algebra, polynomial long division is an algorithm for dividing a polynomial by another polynomial of the same or lower degree, a generalised version of the familiar arithmetic technique called long division. It can be done easily by hand, because it separates an otherwise complex division problem into smaller ones. Sometimes using a shorthand version called synthetic division is faster, with ...
