The aircraft design process is the engineering design process by which aircraft are designed. These depend on many factors such as customer and manufacturer demand, safety protocols, physical and economic constraints etc. For some types of aircraft the design process is regulated by national airworthiness authorities.

Aerodynamics and Aircraft Design Software

An aircraft is a machine that is able to fly by gaining support from the air. It counters the force of gravity by using either static lift or by using the dynamic lift of an airfoil, or in a few cases the downward thrust from jet engines. Common examples of aircraft include airplanes, helicopters, airships (including blimps), gliders, and hot air balloons. ...

The design of an annular combustion chamber in a gas turbine engine is the backbone of this paper. It is specifically designed for a low bypass turbofan engine in a jet trainer aircraft.

Aircraft Fuel Injection/ EFI. EFI in the Experimental aircraft world is becoming the new "normal" today. While some people cling to 100 year old technology such as carbs, mechanical injection and magnetos, the fact is our aircraft EFI/EI can do the job better, with less pilot monitoring and less maintenance.

Based on the popular STOL CH 701 design from Chris Heintz that was first introduced more than 25 years ago, the STOL CH 750 design incorporates all of the 701's amazing short-field capabilities, while maximizing cabin size and load carrying capability allowed under the FAA's Sport Pilot / Light Sport Aircraft category. Like the original, the STOL CH 750 aircraft was developed as an "off ...
