Diophantine Equation--3rd Powers. As a part of the study of Waring's problem, it is known that every positive integer is a sum of no more than 9 positive cubes ($\sum_{i=1}^9 i^3 = 2025$), that every "sufficiently large" integer is a sum of no more than 7 positive cubes ($\sum_{i=1}^7 i^3 = 343$; although it is not known if 7 can be reduced), and that every integer is a sum of at most 5 signed cubes ($\sum_{i=1}^5 i^3 = 125$; although it is not known if 5 can be ...

As a branch of mathematics, algebra emerged at the end of the 16th century in Europe, with the work of FranÃ§ois ViÃ¨te. Algebra can essentially be considered as doing computations similar to those of arithmetic but with non-numerical mathematical objects. However, until the 19th century, algebra consisted essentially of the theory of equations. For example, the fundamental theorem of algebra ...
