The oldest forms of electronic filters are passive analog linear filters, constructed using only resistors and capacitors or resistors and inductors. These are known as RC and RL single-pole filters respectively. However, these simple filters have very limited uses.

In signal processing, a filter is a device or process that removes some unwanted components or features from a signal. Filtering is a class of signal processing, the defining feature of filters being the complete or partial suppression of some aspect of the signal. Most often, this means removing some frequencies or frequency bands. However, filters do not exclusively act in the frequency domain ...

(2007-06-08) Complex Pulsatance and Complex Amplitudes Confusingly, complex pulsatance is often called complex frequency.. Technically, a (real) pulsatance is a rate of phase change per unit of time. It's expressed in angular units (radians or degrees) per unit of time (second).
