A honeycomb is a mass of hexagonal prismatic wax cells built by honey bees in their nests to contain their larvae and stores of honey and pollen.. Beekeepers may remove the entire honeycomb to harvest honey. Honey bees consume about 8.4 lb (3.8 kg) of honey to secrete 1 lb (454 g) of wax, so it makes economic sense to return the wax to the hive after harvesting the honey.

The surface area of a solid object is a measure of the total area that the surface of the object occupies. The mathematical definition of surface area in the presence of curved surfaces is considerably more involved than the definition of arc length of one-dimensional curves, or of the surface area for polyhedra (i.e., objects with flat polygonal faces), for which the surface area is the sum ...

Print this image from this page Print this image from pdf. A 3D or three dimensional shape has 3 dimensions: width, depth and height. 3D shapes have other properties, such as volume (think of the entire space within the shape), surface area (think of all the sides you would be able to color), vertices (corner points), faces (individual surface areas), edges (corners).
