

### **association of interleukin 6 pdf**

Interleukin 9, also known as IL-9, is a pleiotropic cytokine (cell signalling molecule) belonging to the group of interleukins. IL-9 is produced by variety of cells like mast cells, NKT cells, Th2, Th17, Treg, ILC2, and Th9 cells in different amounts. Among them, Th9 cells are regarded as the major CD4+ T cells that produce IL-9.

Glycoprotein 130 (also known as gp130, IL6ST, IL6-beta or CD130) is a transmembrane protein which is the founding member of the class of all cytokine receptors. It forms one subunit of the type I cytokine receptor within the IL-6 receptor family. It is often referred to as the common gp130 subunit, and is important for signal transduction following cytokine engagement.

Abstract. Interleukin-6 (IL-6) is a cytokine originally identified almost 30 years ago as a B-cell differentiation factor, capable of inducing the maturation of B cells into antibody-producing cells.

Abstract. Interleukin 7 and 15 are considered powerful pro-inflammatory cytokines, they have the ability to destabilize chromosomes and induce tumorigenesis.

Abstract. Interleukin (IL)-6, a cytokine featuring redundancy and pleiotropic activity, contributes to host defense against acute environmental stress, while dysregulated persistent IL-6 production has been demonstrated to play a pathological role in various autoimmune and chronic inflammatory diseases.

Background. Neutralizing interleukin (IL) 17F in addition to IL-17A might provide a more complete and specific approach to inhibiting inflammation.

### **Dual neutralization of both interleukin 17A and**

The thyroid gland is a butterfly-shaped endocrine gland that is normally located in the lower front of the neck. The thyroid's job is to make thyroid hormones, which are secreted into the blood and then carried to every tissue in the body.

L'interleukine 6 (IL6) est une cytokine impliquée avec l'IL1  $\beta$  et le facteur de nécrose tumorale dans la phase aiguë de l'inflammation (il s'agit d'une cytokine pro-inflammatoire). Elle stimule notamment la synthèse des protéines de la phase aiguë de l'inflammation (APP, ou acute phase protein) au niveau du foie. Son gène est IL6 situé sur le chromosome 7 humain.
