Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

Why a Scientific Format? The scientific format may seem confusing for the beginning science writer due to its rigid structure which is so different from writing in the humanities. One reason for using this format is that it is a means of efficiently communicating scientific findings to the broad community of scientists in a uniform manner.

Molecular biology / mɒˈlɪkjʊləˈbɪɒlədʒi / is a branch of biology that concerns the molecular basis of biological activity between biomolecules in the various systems of a cell, including the interactions between DNA, RNA, proteins and their biosynthesis, as well as the regulation of these interactions. Writing in Nature in 1961, William Astbury described molecular biology as:

Xing et al. describe the tail of a non-avian theropod (coelurosaur) preserved in Burmese amber, combining bone outlines with microscopic details of plumage and integument. This specimen sheds new light on the appearance and evolution of plumage of dinosaurs, providing a direct association between amber-entombed plumage and body fossil material.
