Abstract: Environmental, economic, and safety challenges have provoked packaging scientists and producers

to partially substitute petrochemical-based polymers with biodegradable ones. The general purpose of this review is to introduce polylactic acid (PLA), a compostable, biodegradable thermoplastic made from renewable sources.

Poly-Lactic Acid: Production, Applications, Nanocomposites

Sustainable production of renewable energy is being hotly debated globally since it is increasingly understood that first generation biofuels, primarily produced from food crops and mostly oil seeds are limited in their ability to achieve targets for biofuel production, climate change mitigation and economic growth.

Food is any substance consumed to provide nutritional support for an organism. It is usually of plant or animal origin, and contains essential nutrients, such as carbohydrates, fats, proteins, vitamins, or minerals. The substance is ingested by an organism and assimilated by the organism's cells to provide energy, maintain life, or stimulate growth. ...

Fig. 1 is a schematic diagram showing the structure of an all-solid-state lithium battery, consisting of cathode, electrolyte, anode and current collectors. As identified, the electrolyte plays a critical role in the all-solid-state Li batteries. It functions as both an ionic conductor and separator.
