Power, efficiency and productivity for steel, timber, aluminium and concrete structures. CYPE 3D is an agile and efficient program brought about to carry out structural calculations in 3 dimensions of bars made up of steel, timber, aluminium, concrete or any other material, including the foundations with pad footings, piles and strap and tie beams.

Abstract. Homotopy Analysis Method (HAM) is applied to find the critical buckling load of the Euler columns with continuous elastic restraints. HAM has been successfully applied to many linear and nonlinear, ordinary and partial, differential equations, integral equations, and difference equations.
