Arithmetic coding is a form of entropy encoding used in lossless data compression. Normally, a string of characters such as the words "hello there" is represented using a fixed number of bits per character, as in the ASCII code. When a string is converted to arithmetic encoding, frequently used characters will be stored with fewer bits and not-so-frequently occurring characters will be stored ...

For the Wikimedia Foundation localisation team, see Wikimedia Language engineering. For translating pages on this wiki, see Project:Language policy.. This page gives a technical description of MediaWiki's internationalisation and localisation (i18n and L10n) system, and gives hints that coders should be aware of. Our mantra is that i18n must not be an afterthought: it's an essential component ...

The above code specifies a red oval inscribed in a yellow rectangle. One of the most flexible of SVG's primitive objects is the path. <path> uses a series of lines, splines (either cubic or quadratic), and elliptical arcs to define arbitrarily complex curves that combine smooth or jagged transitions.
