Wideband Antennas; TECOM has a broad catalog of wideband antennas ranging from 20MHz to 40GHz. These antennas include directional antennas such as log periodic and horn antennas, which are used in multiple applications including broadband surveillance, tracking and jamming.

Performance enhancement, keeping fixed antenna size, is an active research topic to improve the overall device/antenna performance. To design smart and compact wireless products, we cannot rely on increasing the antenna size to achieve the desired results; therefore, researchers are actively looking for innovative solutions to improve the performance of spiral antennas while keeping the size ...

Research We cover several research themes related to modern electromagnetics. We are keen to understand and discover fundamental limits of electromagnetic structures such as electrically small radiators, ultra thin absorbers, dynamic control of antenna beams and tunable/smart materials.

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.
