Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

Species distribution is the manner in which the population of a biological taxon is spatially arranged. Species distribution is not to be confused with dispersal, which is the movement of individuals away from their region of origin or from a population center of high density. A similar concept is species range, which is often represented as shaded areas on a map.

Reliability Glossary - The glossary contains brief definitions of terms frequently used in reliability engineering and life data analysis. The purpose of these entries is to provide a quick explanation of the terms in question, not to provide extensive explanations or mathematical derivations.

Deterministic modeling process is presented in the context of linear programs (LP). LP models are easy to solve computationally and have a wide range of applications in diverse fields. This site provides solution algorithms and the needed sensitivity analysis since the solution to a practical problem is not complete with the mere determination of the optimal solution.

Furthermore, assume that component 1 follows an exponential distribution with a mean of 10,000 (and component 2 follows a Weibull distribution with  $\alpha = 2$  and  $\beta = 10,000$ ). The reliability equation of this system is: The system cdf is:  $F(t) = 1 - e^{-t/10,000} (1 - e^{-t/10,000})^2$ . System pdf. Once the equation for the reliability of the system has been obtained, the system's pdf can be determined. The pdf is the derivative of the reliability function with ...
