are of interest both theoretically, as unexplored computational challenges, and practically, bearing on the evolution and function of the code and coding molecules. Taken together, the solution of these challenges at the intersection of computational and biological science provides reciprocal illumination to each.

Emerging Trends in Computational Biology, Bioinformatics

Understanding the computational principles that underlie complex behavior is a central goal in cognitive science, artificial intelligence, and neuroscience. In an attempt to unify these disconnected communities, we created a new conference called Cognitive Computational Neuroscience (CCN). The inaugural meeting revealed considerable enthusiasm but significant obstacles remain.
