It is the most common term used in vibration analysis to describe the frequency of a disturbance. Never forget the 1 cycle / second relationship ! Traditional vibration analysis quite often expresses frequency in terms of cycle / minute (cpm). This is because many pieces of process equipment have running speeds related to revolutions / minute (rpm).

companies using, repairing or manufacturing rotating machinery of common types. These types include horizontal and vertical pumps, compressors, steam turbines, motors, generators, alternators, geared systems, and gas turbines. The emphasis is on the vibration phenomena exhibited by the machine undergoing high vibration.
