Hadoop MapReduce is a software framework for easily writing applications which process vast amounts of data (multi-terabyte data-sets) in-parallel on large clusters (thousands of nodes) of commodity hardware in a

reliable, fault-tolerant manner.

Hue 3.8 brings a new way to directly submit Spark jobs from a Web UI.. Last year we released Spark Igniter to enable developers to submit Spark jobs through a Web Interface. While this approach worked, the UX left a lot to be desired. Programs had to implement an interface, be compiled beforehand and YARN support was lacking.

Big data is a term used to refer to data sets that are too large or complex for traditional data-processing application software to adequately deal with. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate. Big data challenges include capturing data, data storage, data analysis ...
