In the internal combustion engine application, the timing belt connects the crankshaft to the camshaft(s), which in turn controls the opening and closing of the engine's valves. Gear or chain systems can also be used to connect the crankshaft to the camshaft at the correct timing.

A timing belt is a part of an internal combustion engine that has the function of controlling the timing of the engine's valves. In the early 1990s, the first commercial CPN in automotive applications was developed by Toyota in collaboration with Ube for Toyota Camry cars ( Alexandre and Dubois, 2000 ).
