A time series is a series of data points indexed (or listed or graphed) in time order. Most commonly, a time series is a sequence taken at successive equally spaced points in time. Thus it is a sequence of discrete-time data. Examples of time series are heights of ocean tides, counts of sunspots, and the daily closing value of the Dow Jones Industrial Average.

Over each subsequent interview period more and more of the sample dropped out of the study leaving only 47.9% who completed the full study. That said, the study is detailed with hundreds of difficult and intrusive questions that tolerant students responded to.

### **Econometrics By Simulation**

This is an excellent theoretical summary of econometrics. It isn't an excellent textbook. In fact, it probably shouldn't be viewed as a textbook (and I think it's unfortunate that that's the way it usually gets used).

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.
