Birds fly in a variety of ways, ranging from gliding to soaring to flapping flight to hovering. Of these, the simplest type of flight is gliding. A gliding bird uses its weight (mass) to overcome air resistance to its forward motion. To do this effectively, of course, requires a certain mass &, as a result, only large birds, such as vultures, glide on a regular basis.

The primary objective of this book is to present and develop the fundamentals and principal applications of plasma physics, with an emphasis on what is usually called high-temperature plasma physics where the plasma is nearly fully ionized with nearly negligible effects of neutral particles on the plasma behavior.

Computational fluid dynamics (CFD) is a branch of fluid mechanics that uses numerical analysis and data structures to solve and analyze problems that involve fluid flows are used to perform the calculations required to simulate the interaction of liquids and gases with surfaces defined by boundary conditions. With high-speed supercomputers, better solutions can be achieved.

The Navier–Stokes existence and smoothness problem concerns the mathematical properties of solutions to the Navier–Stokes equations, one of the pillars of fluid mechanics. These equations describe the motion of a fluid in space. Solutions to the Navier–Stokes equations are used in many practical applications. However, theoretical understanding of the solutions to these equations is ...

Innovation as Defining and Resolving Wicked Problems . Ozzie Mascarenhas SJ, Ph.D. May 11, 2009.

Increasingly, today's CEOs as strategists face wicked problems for which they are ill-equipped (Camillus 2008).

I. Introduction. Noise, or unwanted sound, is one of the most common occupational hazards in American workplaces. The National Institute for Occupational Safety and Health (NIOSH) estimates that 30 million workers in the United States are exposed to hazardous noise.

Devil In The Dark (1967) The Horta was an example of Silicon life.; Now we are really sailing off into terra incognita. "Here be dragons" and all that. But if you have starships, you almost have to have aliens (Isaac Asimov's Foundation trilogy being the most notable exception).The "science" is called Astrobiology, the famous "science in search of a subject".

Given the same amount of absorbed solar energy coming in, the amount of IR escaping to space at the top of the atmosphere will indeed be the same no matter how many greenhouse gases there are (assuming the system is in equilibrium).

Les premières mesures des quantités de pluie connues furent faites par les Grecs vers 500 av. J.-C. Cent ans plus tard, en Inde, la population utilisait des bols pour recueillir l'eau de pluie et la mesurer [3]. Dans les deux cas, la mesure de pluie aidait à estimer le rendement futur des cultures.
