An absorption heat pump is an air-source heat pump driven not by electricity, but by a heat source such as solar-heated water, or geothermal-heated water. Absorption refrigerators also work on the same principle, but are not reversible and cannot serve as a heat source.

Absorption heat pump - Wikipedia

A chiller is a machine that removes heat from a liquid via a vapor-compression or absorption refrigeration cycle. This liquid can then be circulated through a heat exchanger to cool equipment, or another process stream (such as air or process water). As a necessary by product, refrigeration creates waste heat that must be exhausted to ambience, or for greater efficiency, recovered for heating ...

the machine crystallizes. Hence, continuously knowing the Lithium Bromide concentration is as important as knowing the current drawn by motor.
