A light-emitting diode (LED) is a two-lead semiconductor light source. It is a p-n junction diode that emits light when activated. When a suitable current is applied to the leads, electrons are able to recombine with electron holes within the device, releasing energy in the form of photons. This effect is called electroluminescence, and the color of the light (corresponding to the energy of ...

A solar cell, or photovoltaic cell, is an electrical device that converts the energy of light directly into electricity by the photovoltaic effect, which is a physical and chemical phenomenon. It is a form of photoelectric cell, defined as a device whose electrical characteristics, such as current, voltage, or resistance, vary when exposed to light.. Individual solar cell devices can be ...

02 Market and Industry Trends. Relatively inflexible baseload generators, such as coal and nuclear power plants, have always been complemented by FLEXIBLE GENERATION to adapt the electricity supply to time-variable demand. Hydropower and other dispatchable renewables such as bio-power, and concentrating solar thermal power (CSP) with thermal storage offer flexible renewable energy generation ...
