Learn about relational vs. NoSQL data modeling, the NoSQL data modeling process, and get guidelines for data modeling in NoSQL JSON document databases.

Data Modeling Guidelines for NoSQL JSON Document - DZone

Big data refers to the high volume, velocity, and variety of information assets that demand new, innovative forms of processing for enhanced decision making, business insights, and process optimization .As a relatively new concept, the basic notion of big data includes the techniques and technologies required to manage very large quantities of data.

Big data technologies and Management: What conceptual

A NoSQL (originally referring to "non SQL" or "non relational") database provides a mechanism for storage and retrieval of data that is modeled in means other than the tabular relations used in relational databases. Such databases have existed since the late 1960s, but did not obtain the "NoSQL" moniker until a surge of popularity in the early twenty-first century, triggered by the needs of Web ...

Emerging Trends Of ETL: Big Data and Beyond - DZone

A spatial database is a database that is optimized for storing and querying data that represents objects defined in a geometric space. Most spatial databases allow the representation of simple geometric objects such as points, lines and polygons. Some spatial databases handle more complex structures such as 3D objects, topological coverages, linear networks, and TINs.
