Prolog is a logic programming language associated with artificial intelligence and computational linguistics.. Prolog has its roots in first-order logic, a formal logic, and unlike many other programming languages, Prolog is intended primarily as a declarative programming language: the program logic is expressed in terms of relations, represented as facts and rules.

A fifth-generation programming language (5GL) is a programming language based on problem solving using constraints given to the program, rather than using an algorithm written by a programmer. [citation needed] Most constraint-based and logic programming languages and some other declarative languages are fifth-generation languages.
