An adrenergic agonist is a drug that stimulates a response from the adrenergic receptors. The five main categories of adrenergic receptors are: α_1 , α_2 , β_1 , β_2 , and β_3 , although there are more subtypes, and agonists vary in specificity between these receptors, and may be classified respectively. However, there are also other mechanisms of adrenergic agonism.

Atropine is a medication to treat certain types of nerve agent and pesticide poisonings as well as some types of slow heart rate and to decrease saliva production during surgery. It is typically given intravenously or by injection into a muscle. Eye drops are also available which are used to treat uveitis and early amblyopia. The intravenous solution usually begins working within a minute and ...

Le médicament homéopathe est obtenu par une succession de dilutions d'une teinture mère. La plus utilisée, la dilution par 100 est notée « CH » pour centésimal hahnemannienne. Elle correspond à 100 dilutions successives du composé et se comprend par la formule suivante : n dilutions CH = 100-n = 10-2n dilutions soit une concentration en produit actif divisée par 10 2n.

Ratschläge - was man selbst zumindest versuchen kann: Ich unterscheide zwischen den Dingen bei denen ich etwas tun kann, und den Dingen bei denen ich etwas tun muss.. Ich verschwende meine Energie nicht mit Dingen oder Vorhaben auf die ich nach meiner Erfahrung keinen Einfluss habe.

Alternative Therapien der Depression

L'aciclovir est peu soluble dans l'eau, et n'est que partiellement absorbé lors de la prise par voie orale (20 %). Lors de la prise par voie orale, le pic de concentration plasmatique est atteint en 1 à 2 heures. Si de fortes doses sont nécessaires, l'administration doit être faite par voie intraveineuse.
