In computer programming, a code smell is any characteristic in the source code of a program that possibly indicates a deeper problem. Determining what is and is not a code smell is subjective, and varies by language, developer, and development methodology. . The term was popularised by Kent Beck on WardsWiki in the late 1990s. Usage of the term increased after it was featured in the book ...

Most modern business application development projects use object technology such as Java or C# to build the application software and relational databases to store the data. This isn't to say that you don't have other options, there are many applications built with procedural languages such as COBOL and many systems will use object databases or XML databases to store data.
