

refactoring improving the design pdf

Code refactoring is the process of restructuring existing computer codeâ€”changing the factoringâ€”without changing its external behavior. Refactoring improves nonfunctional attributes of the software.

Code refactoring - Wikipedia

I've put together this catalog to help you find and explore the refactorings in the source books. You can expand each refactoring to show the problem/solution summary for the refactoring or you can navigate to the refactoring's online page.

Definition. One way to look at smells is with respect to principles and quality: "Smells are certain structures in the code that indicate violation of fundamental design principles and negatively impact design quality".

Code smell - Wikipedia

Data, architectural, and interface design must be translated into operational software. To accomplish this, the design must be represented at a level of abstraction that is close to code.
