In statistics, inter-rater reliability (also called by various similar names, such as inter-rater agreement, inter-rater concordance, interobserver reliability, and so on) is the degree of agreement among raters. It is a score of how much homogeneity, or consensus, there is in the ratings given by various judges. In contrast, intra-rater reliability is a score of the consistency in ratings given ...

Types. There are several general classes of reliability estimates: Inter-rater reliability assesses the degree of agreement between two or more raters in their appraisals.; Test-retest reliability assesses the degree to which test scores are consistent from one test administration to the next. Measurements are gathered from a single rater who uses the same methods or instruments and the same ...

The details about these tools will be brief as books are written about each item. Think of the presentations below as hors d'œuvres (a little snack food or starters)â€”not the main course. The most important reliability tool is a Pareto distribution based on moneyâ€”specifically based on the cost of unreliability which directs attention to work on the most important money problem first.

Course Descriptions. Applied Regression Analysis for Evaluators. Instructor: Gary T. Henry, PhD Description: Evaluators often face the situation where program outcomes vary across different participants and they want to explain those differences. To understand the contribution of the program to the outcomes, it is often necessary to control for the influence of other factors.
