In 3-dimensional geometry, for a finite planar surface of scalar area S and unit normal \hat{n} , the vector area \vec{S} is defined as the unit normal scaled by the area: $\vec{S} = S \hat{n}$. For an orientable surface S composed of a set S_i of flat facet areas, the vector area of the surface is given by $\vec{S} = \sum S_i \hat{n}_i$ where \hat{n}_i is the unit normal vector to the area S_i . For bounded, oriented curved surfaces that are ...

In mathematics, Green's theorem gives the relationship between a line integral around a simple closed curve C and a double integral over the plane region D bounded by C . It is named after George Green, though its first proof is due to Bernhard Riemann and is the two-dimensional special case of the more general Kelvin-Stokes theorem
