to meet our gain, low cost, and low profile standards. Once an antenna design is chosen, we design our antenna using a simulation program. Following, we build the design and test our antenna to compare simulated results with experimental results to evaluate whether or not the designs goals were met.

antenna would radiate in the same direction when driven with the same input power. Usually we are only interested in the maximum gain, which is the gain in the direction in which the antenna is radiating most of the power. An antenna gain of 3 dB compared to an isotropic antenna would be written as 3 dBi.
