

the law of accelerating pdf

The Law of Accelerating Returns Applied to the Growth of Computation. The following provides a brief overview of the law of accelerating returns as it applies to the double exponential growth of computation. This model considers the impact of the growing power of the technology to foster its own next generation.

be left the processes of evolution; to historians the single interest is the law of reaction between force and force -- between mind and nature -- the law of progress. 4. Resistance to the Law of Acceleration is Futile Or better, one might, for convenience, use the formula of squares to serve for a law of mind.

(5) $V = c \cdot 1 \cdot W$ But now we include the fact that the resources deployed for computation, N , are also growing exponentially: (6) $N = c \cdot 3 \cdot e^{c \cdot 4t}$ The rate of change of world knowledge is now proportional to the product of

APPENDIX The Law of Accelerating Returns Revisited

Today, in accordance with the common wisdom, everyone expects continuous technological progress and the social repercussions that follow. But the future will be far more surprising than most observers realize: few have truly internalized the implications of the fact that the rate of change itself is accelerating.

The Law of Accelerating Acceleration says that the faster you move toward financial freedom, the faster it moves toward you. The first corollary of this law is that nothing succeeds like success. The more money you accumulate, and the more success you achieve, the more and faster money and success seem to move toward you, from a variety of ...

predicts how much time is required for the resulting velocity to equal the rate of acceleration. 4. The Law of Relative Acceleration Whereas the classical formula, equation 3, is incorrect for constant acceleration, it is correct for defining relative acceleration and is repeated here in modified form as the Law of relative acceleration.

The Law of Accelerating Returns has in many ways altered public perception of Moore's law. [citation needed] It is a common (but mistaken) belief that Moore's law makes predictions regarding all forms of technology, [citation needed] when really it only concerns semiconductor circuits.
