In mathematics, the Radon transform is the integral transform which takes a function f defined on the plane to a function Rf defined on the (two-dimensional) space of lines in the plane, whose value at a particular line is equal to the line integral of the function over that line. The transform was introduced in 1917 by Johann Radon, who also provided a formula for the inverse transform.

In mathematics, the inverse Laplace transform of a function $F(s)$ is the piecewise-continuous and exponentially-restricted real function $f(t)$ which has the property: $\{ \} = \{ () \} = ()$, where $\{ \}$ denotes the Laplace transform.. It can be proven that, if a function $F(s)$ has the inverse Laplace transform $f(t)$, then $f(t)$ is uniquely determined (considering functions which differ from each other only on a ...

The Journal of Mathematical Analysis and Applications presents papers that treat mathematical analysis and its numerous applications. The journal emphasizes articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, and engineering, particularly those that stress analytical aspects and novel problems and their solutions.
